Hiring Manager
Ontario Power Generation
Pickering, ON

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Junior Full-Stack Developer position at Ontario Power Generation. With over three years of hands-on experience building secure, scalable web applications using modern frameworks like React, Node.js, and PostgreSQL, I am excited by the opportunity to contribute to OPG's mission of powering a sustainable future.

During my most recent role with Yuvoice, I improved content delivery speed by building reusable components that reduced update time by 40%. I also led the integration of PayPal and automated mailing systems using Node.js, which streamlined payment workflows and reduced manual overhead. Across my projects, I've demonstrated a strong ability to bridge front-end and back-end development with a user-focused mindset.

While I have been working extensively with JavaScript, TypeScript, and cloud integrations (including Docker and API deployment), I am eager to apply and further develop my C# and .NET skills in a high-impact, enterprise-scale environment like OPG. Your emphasis on innovation, cloud infrastructure, and long-term system maintainability aligns strongly with my engineering philosophy.

Moreover, I value the collaborative and inclusive environment OPG promotes. I am confident that my technical foundation, adaptability, and enthusiasm for clean, secure code will allow me to contribute meaningfully to your digital transformation initiatives, especially those tied to Ontario's future energy needs.

Thank you for considering my application. I would welcome the opportunity to bring my full-stack experience, problem-solving skills, and growth mindset to your development team. I look forward to the possibility of discussing how I can support OPG's goals.

Warm regards,
Kareem Alameen
